

# NETWORKING ESSENTIALS FOR ANY SIZE BUSINESS

When it comes down to it networking is really all about connecting computers and peripherals to the Internet to exchange and share information. Sounds simple right?

One of the most difficult tasks is finding the right solution for your current needs, that also allows for growth, without breaking the bank. On the other hand, the older your current equipment gets, the more likely you are to experience network latency, decreased security, and high maintenance costs. Neglecting maintenance on your network could lead to big headaches down the road.

**CHECK OUT SOME OF THE  
CURRENT SOLUTIONS  
FROM OUR MANUFACTURER PARTNERS  
TO HELP OPTIMIZE YOUR NETWORK:**

## Unified Communications

Phone and video calls can be made over the Internet instead of on traditional phone lines, offering a cost benefit as well as allowing you to transform any meeting place into a video-enabled collaboration space.

# NETWORKING ESSENTIALS

## WIRED VS WIRELESS NETWORKING

Wired networks offer an extremely secure connection with administrator control and increased speed and reliability, making them ideal for those who need to move a lot of data around.

If you are looking for an easy-to-install, no-clutter, work-anywhere solution that readily supports the BYOD (bring your own device) initiative then wireless is the way to go. Keep in mind that protocols will need to be put in place to make the wireless connectivity a safe space for those who use it.

## DON'T FORGET THE NAS

Using Network Attached Servers (NAS) will give your business centralized, shared storage allowing employees to quickly and easily access and share saved data and documents, thus upping your productivity!

## REMEMBER:

New technology can save you more than just money! **Contact us today to set up or upgrade your network with solutions from these manufacturers:**
